

Storage Conditions of Frenzelit Insulation Products

Storage recommendations according to ISO 2230

- Room temperature in the warehouse < 25°C
- Air humidity < 65% rel. humidity
- Do not expose to direct sunlight
- Principle of storing „FIFO“ „First In – First Out“

Recommendation for isoplan® products, novaplan®- insulation products

Due to marginal percentage of organic binders in above mentioned products we recommend to observe the above recommendations strictly.

Storage time: 5 years

Remark: Especially in case of increase of ideal temperature of 25°C by 10°C over a longer period a reduced storage time by 50 pct is to be expected.
