

isoLINE HM – for liners, head profiles and T-Liners

Application area

Trenchless rehabilitation systems are an eco-friendly way to eliminate damage in sewer pipes inexpensively, quickly and permanently.

With the isoLINE product range, Frenzelit has developed special textile materials for trenchless sewer rehabilitation which are installed by using inversion systems.

They are used mainly in the rehabilitation of damaged waste water, rainwater and collection pipes inside building structures.

Material profile

isoLINE HM is based on needlemat that is produced from a combination of glass fibres and polypropylene fibres. The outstanding features of the material are high chemical resistance in waste water conditions, good resin uptake and low compressibility. The PVC film used bonds firmly to the textile. It is air- and water-tight as well as chemically resistant.

isoLINE HM is particularly suitable for use with epoxy resins and when exacting demands are made on stiffness in flexure.

Do you have any questions about your application?
The technical textiles information service will help you:

Product characteristics

Needlemat	30% glass fibres 70 % PP fibres
Wall thickness	about 4 mm
Coating/inside	PVC film
Temperature resistance	for hot water curing
Colour	white
Coating	transparent
Seam material	PP sewing thread + PVC sealing tape

In view of the variety of different installation and operation conditions and application and process engineering options, the information given in this prospectus can only provide approximate guidance.

Product range

isoLINE HM head profile

Pipe DN 75 – DN 400
Further dimensions on request
Angle 45 °, 90 °
Connector lengths 300, 400, 500 mm
Brim with or without reinforcement

isoLINE HM T-liner

Main pipe DN 75 – DN 400
Further dimensions on request
Connector DN 50 – DN 250
Angle 45 °, 90 °

isoLINE HM short liner

Pipe DN 75 – DN 400
Further dimensions on request
Other lengths can be produced on request.

Undersize as requested by the customer
